

FlexPAC I

Highly Configurable, Rugged portable

The ideal cost-effective, highly versatile rugged portable solution

The FlexPAC I is a robust, lunchbox computer that is built using heavy-duty metal. It is a tough, go-anywhere unit ideally suitable for harsh/severe environments and mission-critical applications. With passive backplane board configurations to choose from, the available full-length expansion slots of the FlexPAC I can be freely configured with other uniquely designed expansions cards for most applications.

In addition, the LCD screen of the FlexPAC I is guarded with a specially designed anti-glare tempered glass for added protection. Every FlexPAC I comes equipped with dual system cooling side fans and easy access to its expansion ports for immediate system upgrade or maintenance. Functional practicality combined with its elegantly simple and polished design, the extra-rugged FlexPAC I is the most cost-effective, durable and efficient portable solution for your mission-critical applications.
